Section 1: Installation of RGDW Stylesheet Add-In

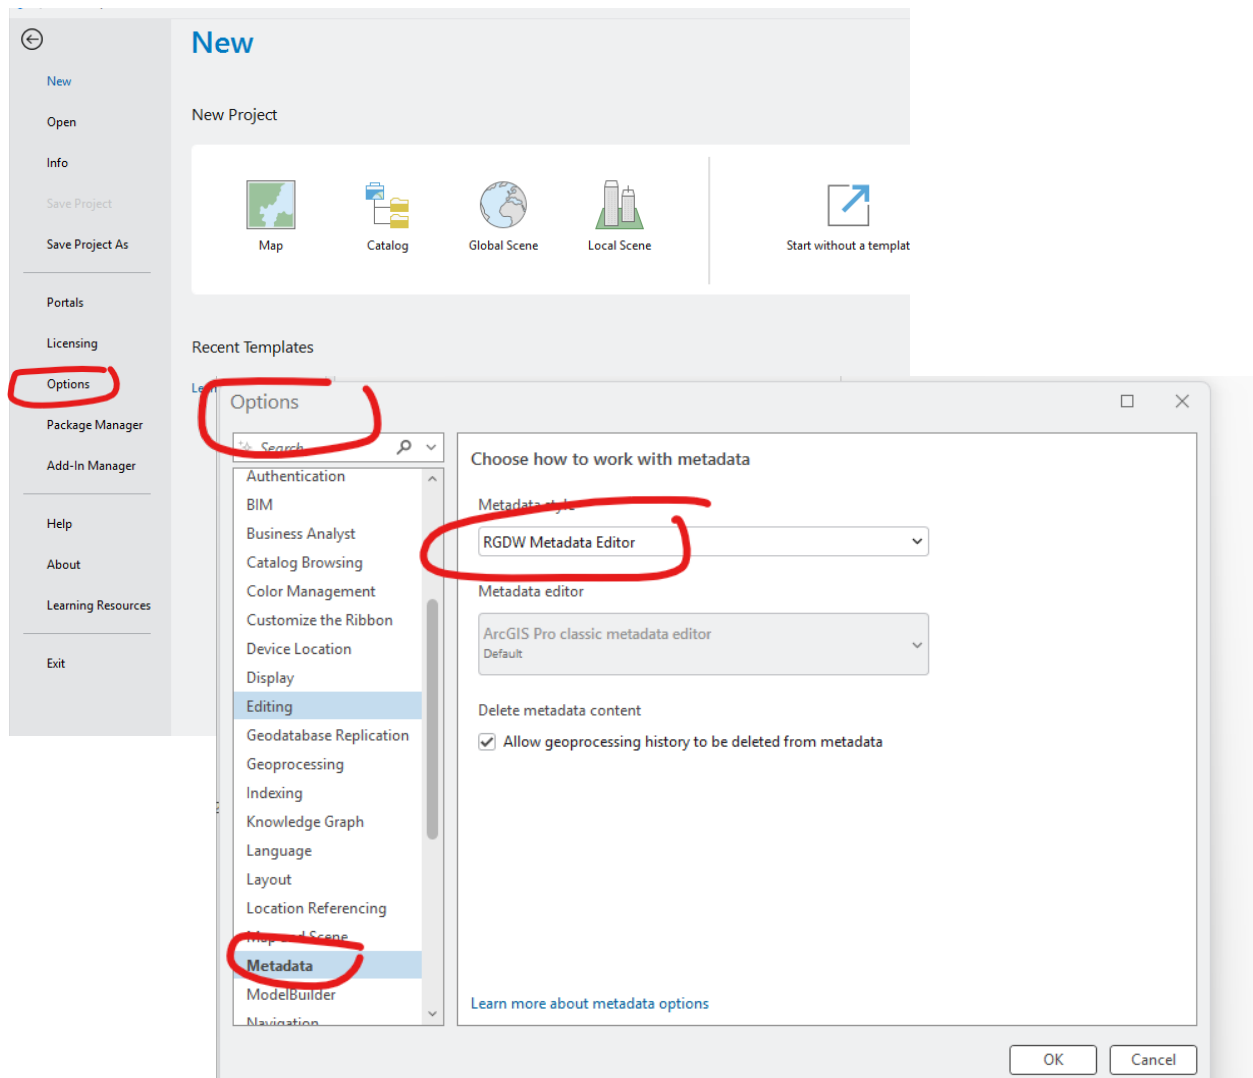

Metadata Transfer from ArcGIS Catalog to ArcGIS Pro

1. To begin our installation of the Metadata add-in, we first need to add files:
 - a. Locate the stylesheets folder for your local ArcGIS Pro install, this location may vary, but by default it is located at: C:\Program Files\ArcGIS\Pro\Resources\Metadata\Stylesheets
 - b. Copy the **RGDW_Publication_1.5.xsl** file into the Stylesheets folder (you may need to copy this from your desktop).
 - c. Copy the **RGDW_Publication_1.5.xlst** in the zip file to the ArcGIS_Imports folder in Stylesheets. Many will be duplicates in which case pick the newer ones (you may need to copy these from your desktop).
 - d. Run the RGDW_Metadata_Editor.esriAddinX by double clicking it and following the instructions on screen until it is installed (you may need to run it from your Desktop).
 - e. Once that is installed, verify in your ArcGIS Add-in manager that it is installed by clicking the Project tab -> Add-in Manager tab. You should see SanGIS_Metadata_Editor listed.

If it does not appear, you can click the options tab under right next to Add-ins and manually add the folder in which the Add-in is located. If it still does not appear, try re-starting ArcGIS Pro.

2. To select the new Metadata stylesheet, simply click the options tab on the left and scroll down on the menu until you see Metadata, then select the stylesheet that you would like to use.

3. You can now use the RGDW Publication 1.5 Stylesheet in ArcGIS Pro (SanGIS Metadata Editor).
